16+ production apps shipped	1,300+ commits, 9 client repos	140+ automated test files	95 migrations in one system

Summary

Full-stack developer who builds the software small and mid-sized businesses run on: inventory, procurement, point of sale and booking systems. Shipped 16+ production web apps end to end, owning requirements, UI design, PostgreSQL schema design, row-level security, automated testing and deployment. Clients include a five-division manufacturing and services group founded in 1987, restaurants, retail brands and service businesses. Five years in sales, finance and customer service before development, so I build around how owners actually work.

Skills

`Frontend:` React 19, Next.js 15/16 (App Router), TypeScript, JavaScript (ES2023), HTML5, CSS3, Tailwind CSS v4, shadcn/ui, responsive design, web accessibility (WCAG)

`Backend and data:` Node.js, PostgreSQL, SQL, Supabase (Auth, Row-Level Security, Edge Functions, Storage), Prisma, Drizzle ORM, Zod, REST APIs, authentication and authorization

`Testing and DevOps:` Playwright, Vitest, end-to-end testing, Git, GitHub Actions, CI/CD, Vercel, Lighthouse, security headers (CSP, HSTS), offline-first PWAs

`3D and motion:` Three.js, React Three Fiber, GSAP ScrollTrigger, Lenis

`AI-assisted development:` Claude Code, ChatGPT, multi-agent workflows with human approval gates and code review

Experience

Founder and Full-Stack Developer, STRUKKD LABS

`2025 - Present`

Software studio for small and mid-sized businesses | Philippines

- Lead developer on the inventory and procurement system for Singel Group of Companies (Next.js 15, TypeScript, Supabase): 557 commits, 95 database migrations and 49 test files covering the full flow from request for quotation to purchase order, approval, receiving, delivery and billing.
- Designed stock to be calculated from movement records instead of stored totals, with void-and-reverse corrections and database rules that block edits and deletes, so every figure traces back to its source documents.
- Enforced separation of duties (whoever raises a document cannot approve or receive it) in both server logic and PostgreSQL row-level security.
- Migrated the studio's operations system (client intake, quotes, contracts, invoices, release tracking) to Supabase: 814 records moved, server-side password authentication, and row-level security on 11 tables.
- Built a release gate that blocks any deploy failing checks for console errors, forms, accessibility, SEO or security.
- Set technical direction, scope and pricing for every client engagement.

Freelance Full-Stack Developer

`2023 - Present`

Direct clients and small brands | Remote

- Delivered web apps for restaurants, retail brands, resorts, a travel agency and a barbershop, owning each project from requirements through deployment and handover.
- Hardened live client apps: added Content Security Policy and HSTS headers, secured file-upload signing behind authentication, and closed open sign-ups on production databases.
- Hand over every project in the client's own repository, hosting and database accounts, so the client owns their software.

Sales, Finance and Client-Facing Roles

5+ years, before development

Real estate sales, financial advisory, HR sourcing, customer service

- Managed client relationships and reviewed financial statements and sales data.
- Handled high-volume candidate sourcing and customer communication.

Projects

Tenda Pro: Restaurant and cafe operations

tenda.ph

Next.js 16 | React 19 | TypeScript | Supabase | Drizzle | Vitest | Playwright

- One back office replacing paper and group chats: POS, kitchen display, QR menu, payroll and end-of-day reconciliation.
- Recipes are linked to stock, so every sale deducts ingredients and tracks cost of goods sold automatically.

Singel Group of Companies: Corporate website

singelgroup.vercel.app

Next.js | TypeScript | Tailwind CSS v4 | React Three Fiber | GSAP | GitHub Actions

- Rebuilt a five-division corporate site with a WebGL hero and scroll-driven motion, with full reduced-motion support.
- Wrote seven automated browser checks measuring motion, scrolling, contrast, performance and layout overlap at six screen widths.

Gold Palace Streetwear and Grimez Collection: Retail systems

gold-palace-streetwear.vercel.app

JavaScript | Supabase | Cloudflare R2 | Vercel

- Storefronts and owner tools for product drops, POS, orders, inventory, finance and reports, backed by 64 automated test files.
- Separate repositories, deployments and databases per brand, so the two businesses' sales never mix.

Courtside PH: Court reservations PWA

courtside-ph.vercel.app

JavaScript | PWA | Supabase Row-Level Security | Edge Functions

- Reservations across six sports with QR check-in, double-booking protection, offline support and an owner earnings view.

The Drop: Retail business suite

Private

JavaScript | PWA | Supabase Edge Functions

- Offline-first back office for a streetwear retailer: POS, inventory, delivery, payroll, P&L and receipt printing. Sales save on the device and sync through an outbox, with staff PINs checked on the server.

Leisure Travel and Tours: Booking website and admin

leisure-travel-tours.vercel.app

JavaScript | Supabase | Vercel

- Baguio staycation and tours site with an admin CMS and two-way calendar (iCal) sync to prevent double bookings.

Checkout Hub PH: Offline business manager

checkout-hub-ph.vercel.app

JavaScript | PWA | Dexie (IndexedDB)

- The tool I first built for my own business: eight modules in one offline-first app, with stock auto-deducted on each invoice plus low-stock and expiry alerts.

STRUKKD LABS Virtual Office: 3D operations workspace

strukkd-labs-virtual-office.vercel.app

JavaScript | Three.js | Node.js | Supabase | Zod

- A 3D workspace for client intake, task allocation and artifact review, where AI-drafted work needs human approval before it moves forward.

Education

BS Information Technology, AMA Computer College, Biñan

2019
